

## ■ QUICK OVERVIEW

# our mission

The goal is to set clear safety standards to mitigate risks and provide owners, captains, crew, and divers with the expertise required to achieve the best and innovative solutions for their diving operations worldwide.

As a strategic partner to our customers, we assist during the entire process by offering, consultancy, specialised equipment, staff, and training.

## ABOUT US

We create new opportunities in the field of submersibles, portable hyperbaric solutions, dive operations safety management, underwater filming, and marine conservation solutions in several maritime-related sectors, by providing safe, innovative, and creative solutions.

**dob** possesses know-how and network, including technical and business information, to start up new projects and create new opportunities for clients. We assist companies throughout the process, from the design of a project through to its implementation.

# BEST SERVICES

## Vessels

We search the market for the ideal vessel that matches your project and can assist you through the entire process.

## Dive Operations Set Up

Bespoke Dive Operations. Creating spaces that enhance the diving experience and safety

## Dive Compressors & Nitrox

Global sales & service of industrial standards. Selecting products and evaluate the best available options to tailor the clients' requirements as precisely as possible.

## Onboard Crew Training

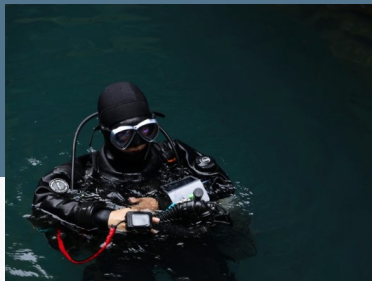

Teamwork and a shared understanding of the crew's tasks are central to our guidelines and recommendations, encouraging safe working practices and service excellency.

# BEST PRODUCTS

## Flexible Hyperbaric Systems

Divers are at risk of a decompression accident. The management of this type of accident is based on an early recompression and hyperbaric oxygen therapy, performed inside a hyperbaric chamber.

## UW Navigation and Communication

The equipment achieves relative positioning between divers and/or in relation to a target and allows real-time communication between the divers and the surface crew. The system also features text communication between units.

## Autonomous Location System

Robust and user-friendly system can be used for safety or in distress situations, allowing a fast recovery thanks to its real-time display of the GPS position. The system includes a control center and personal beacons that communicate with each other through a closed-loop channel.

## Dive Alert

A small, waterproof, robust and economic beacon that emits a distress signal in case of emergency, suitable for any water sport. A must-have device for when the chances of getting lost at sea may become a real hazard.

# Personal submarines that are ideal for Superyachts and robust for Professionals

Bob is proud to be part of the SEAmagine submersibles team, working on global development and sales. SEAmagine is the leading designer and manufacturer of small 2 to 9 people submersibles with over 12,000 accumulated dives within the existing fleet. We produce small personal submersibles with depths ranging from 150 metres to 2500 metres deep for professional or pleasure purposes. All personal subs are based on the company's patented submarine technology, providing safe and comfortable surface operations and superior underwater performance.

# Marine Conservation

The nature of our business and working closely with Marine Conservation Organisations worldwide, gives us the chance to collaborate with specific projects that we believe will help slow down our Oceans degradation.

We focus on tracking very specific projects needing a short-term but effective fundraising campaign. We want to make sure that every cent we are bringing in corresponds to *something*. With that in mind we will be sharing the results on our Blog.
